# New Hampshire Regional Health Profiles

## Index to Figures

**Group** = The indicator grouping used in the Regional Health Profiles.

CH - Indicators of Current Health

HR - Indicators of Use of Health Care Resources

FH - Indicators of Risks to Future Health

AI - Additional Indicators

HNH 2010 – Healthy New Hampshire 2010 related

**M/N** = Figures for Manchester and Nashua HSAs

**NA** = Sample size of the 1999 NH Household Insurance Coverage and Access Survey was not sufficient to permit breaking the data into smaller components than HSAs.

Indicator	Full Wording	Group	State	Page	M/N
How to Read the Figures				7	
Birth rate	Birth rate per 1,000 females ages 15 - 44	AI		9	10
Births covered by Medicaid	Rate of mothers delivering with Medicaid payor per 1,000 deliveries	FH		11	12
Births to women who smoked during pregnancy	Maternal smoking rate per 1,000 deliveries	FH HNH 2010		13	14
Births to women with less than 12 years of education	Maternal education less than 12 years per 1,000 deliveries	FH		15	16
Births to teens	Teen birth rate per 1,000 females ages 15 – 17	FH		17	18
Births to unmarried women	Unmarried mothers per 1,000 deliveries	FH		19	20
Births with late or no prenatal care	Late or no prenatal care (care begun after 2 <sup>nd</sup> trimester, or not at all) per 1,000 deliveries	FH HNH 2010		21	22
Births with low birth weight	Low birth weight births (<2500 grams) per 1,000 births	FH HNH 2010		23	24

# New Hampshire Regional Health Profiles

Indicator	Full Wording	Group	State	Page	M/N
Deaths from all cancers	Cancer mortality rate per 1,000 ages 25+	CH	25	26	
Deaths from breast cancer	Breast cancer mortality rate per 1,000 females ages 25+	CH HNH 2010	27	28	
Deaths from firearms	Firearms mortality rate per 1,000 ages 15+	CH HNH 2010	29	30	
Deaths from heart disease	Heart disease mortality rate per 1,000 ages 25+	CH HNH 2010	31	32	
Deaths from suicide	Suicide mortality rate per 1,000 ages 15+	CH HNH 2010	33	34	
Deaths from unintentional injuries	Mortality rate due to unintentional injuries per 1,000 ages 15+	CH HNH 2010	35	36	
Deaths related to diabetes	Diabetes-related mortality rate per 1,000 ages 45+	CH	37	38	
Families at or below 200% of poverty	Percentage of families with income less than 200% of federal poverty level	FH	39	NA	
High school completion	Percentage of adults under age 65 with a high school degree	FH	40	NA	
Hospital admissions for adults with ambulatory care sensitive conditions	Adult admissions rate for ambulatory care sensitive conditions per 1,000 ages 18 – 64	HR	41	42	
Hospital admissions for adults with injuries	Adult hospitalization rate for injury per 1,000 ages 18 – 64	HR	43	44	

# New Hampshire Regional Health Profiles

Indicator	Full Wording	Group	State	Page	M/N
Hospital admissions for ambulatory care sensitive chronic conditions	Admissions rate per 1,000 population for ambulatory care sensitive chronic conditions	HR	45	46	
Hospital admissions for ambulatory care sensitive rapid onset conditions	Admissions rate per 1,000 population for ambulatory care sensitive rapid onset conditions	HR	47	48	
Hospital admissions for children with ambulatory care sensitive conditions	Pediatric admissions rate for ambulatory care sensitive conditions per 1,000 ages 1 – 17	HR HNH 2010	49	50	
Hospital admissions for children with injuries	Pediatric hospitalization rate for injury per 1,000 ages 1 – 17	HR HNH 2010	51	52	
Hospital admissions for elderly with ambulatory care sensitive conditions	Elder admissions rate for ambulatory care sensitive conditions per 1,000 ages 65+	HR	53	54	
Hospital admissions for elderly with injuries	Elder Hospitalization rate for injury per 1,000 ages 65+	HR	55	56	
Incidence of breast cancer	Breast cancer incidence rate per 1,000 females ages 25+	CH	57	58	
Incidence of colon cancer	Colon cancer incidence rate per 1,000 ages 25+	CH HNH 2010	59	60	
Incidence of lung cancer	Lung cancer incidence rate per 1,000 ages 25+	CH	61	62	

# New Hampshire Regional Health Profiles

Indicator	Full Wording	Group	State	Page	M/N
Incidence of prostate cancer	Prostate cancer incidence rate per 1,000 males ages 25+	CH	63	64	
Medicaid and Food Stamps – Adults	Adults (age 19+) receiving Medicaid/Food stamps, 1997 - 1998	FH	65	66	
Medicaid and Food Stamps – Children	Children (< age 19) receiving Medicaid/Food Stamps, 1997 – 1998	FH	67	68	
Perception of access to care	Percentage of population under age 65 not “Extremely” or “Very” confident in access to care	HR	69	NA	
Perception of personal health status	Percentage of population under age 65 reporting “Good”, “Very Good”, or “Excellent” health	CH	70	NA	
Population employed in firms of 10 or fewer employees	Percentage of population under age 65 reporting employment in a firm with 10 or fewer employees	FH	71	NA	
Population with chronic condition lasting more than one year	Percentage of population under age 65 reporting a chronic condition lasting one year or more	CH	72	NA	
Population with no usual source of medical care	Percentage of population under age 65 reporting no usual source of medical care	HR HNH 2010	73	NA	
Population without a dental visit in the prior year	Percentage of population under age 65 without a dental visit	HR	74	NA	

## New Hampshire Regional Health Profiles

Indicator	Full Wording	Group	State	Page	M/N
Population without a physician visit in the prior year	Percentage of population under age 65 without a physician visit	HR	75	NA	
Population without dental coverage	Percentage of population under age 65 without dental coverage	FH	76	NA	
Population without health insurance	Percentage of population under age 65 without health insurance	FH HNN 2010	77	NA	
Population without health insurance for part of prior year	Percentage of population under age 65 reporting a period without health insurance in the past year	FH	78	NA	
Premature deaths	Premature deaths per 1,000 ages 18 – 64	CH	79	80	

# New Hampshire Regional Health Profiles

## Understanding the *Regional Profile* Figures

The charts in the *Regional Profiles* provide a graphical representation of the same data contained in the related tables. Each chart, depending on the source of the data, illustrates the point estimates of the calculated HSA rates or percents. Built around each HSA point estimate is a 95% confidence interval. All HSA point estimates are depicted so that they can be interpreted in relationship to the State range for the health indicator. The following figure illustrates an example and the narrative below describes how this figure should be interpreted:

- The single point labeled “Estimated Rate/Percent” represents the point estimate for each HSA rate or percentage.
- The vertical bars around the point “Estimated Rate/Percent” represent the range between the “Upper Confidence Level” and “Lower Confidence Level” for that point estimate. The range between the upper confidence level and the lower confidence level is the confidence interval.
- Based on the calculation used, we can be 95% certain that the true value for the health indicator for an HSA will lie within this confidence interval.
- The two horizontal lines spanning the length of the chart represent the State confidence interval. (The State point estimate, given in the tables, is not shown on the charts.) The top line represents the upper bounds of the confidence level, and the bottom line represents the lower bounds of the confidence level. The area between the upper and lower bounds of confidence is the State range. As with the

## New Hampshire Regional Health Profiles

HSA, we can be 95% certain that the true value for this health indicator for the State will fall within this range.

- When the confidence interval for the HSA overlaps with the confidence interval of the State this is interpreted to mean that there is statistically no significance in the difference between the State and HSA estimate of the rate or percent (i.e., the difference between the two numeric values could be associated with a number of factors, including random chance). When the two confidence intervals do not overlap this is interpreted to mean that there is a statistical difference between the two estimates (i.e., we are 95% confident that the difference between these two estimates is not due to random chance).
- Referring to the figure above: the estimated rate or percentage for HSA 1 is lower than the estimated rate or percentage for the State. The HSA point estimate is statistically different from the State point estimate for this health indicator because the State and HSA confidence intervals do not overlap. The estimated rate or percentage for HSA 2 while lower than that of the State, is not significantly different from the State because the two confidence intervals do overlap

For more information on how the rates, percentages and confidence intervals are calculated, refer to the *Technical Notes* section of the **Regional Profiles**.
